FUTURE.INDUSTRY 2023
ACCELERATING DIGITAL TRANSFORMATION

March 8-9, 2023 / Virtual Global Event

Something magical happens when the world's brightest minds in computational science and artificial intelligence (AI) converge in one place. Suddenly, everything is possible... it's transformed.

At Future.Industry 2023, we'll explore the latest megatrends impacting our world. From electrification and the data-driven enterprise to AI-driven simulation and semiconductors, you'll learn how the convergence of simulation, high-performance computing (HPC), and AI can unlock the full potential of your technology investments.

The Spirit of Convergence
We are rolling our three main events (Future.AI, Future.HPC and Future.Industry) into one. You'll still hear from premier organizations (such as past presenters: Google, AMD, Intel, Leonardo, Ford, BMW, GE, NVIDIA, Sky TV, VIAN AI, etc.), along with Altair experts and executives, but within the spirit of convergence – you receive faster access to the latest tools and processes all in one place.

Join Us to Explore
- The present and future of digital twin technology and product lifecycle design
- Sustainability, lightweighting, and circular economy initiatives
- Cloud computing and the coming exascale boom
- Electronic system design
- E-mobility and electrification
- Automation and machine/deep learning
- Data analytics/machine learning in the BFSI sector
- And much more

Future.Industry 2023 will feature live audio translations into French, German, and Italian.
